

## Conversion Mixer Exchange (CMX) Program

### CMX Program

SPX FLOW's Conversion Mixer Exchange (CMX) program has been introduced to replace customer's failing, obsolete or competitor mixer geardrives with the current leading Lightnin geardrive. Each unit is custom engineered as a drop-in replacement to the existing installation, re-using the motor, sealing device, and in-tank components as condition allows.

The Lightnin Drop-In Upgrade allows customers to benefit from reduced downtime, increased reliability, readily available Parts & Exchanges, and can be supplied on a breakdown basis. Your new Lightnin geardrive is held to original manufacturing standards and tolerances, carrying a new warranty.

### Our Experience

For 90 years SPX FLOW's Lightnin and Plenty brands have been recognized as leaders in Mixing Technology. Our extensive knowledge base and dedication to product development means that not only can we make mixers, but we can service, repair and overhaul them as well.

SPX FLOW provides an industry-leading OEM presence within easy reach of your operation, with guaranteed quick response and turnaround of equipment regardless of Mixer make or model. Our experience spans across several complex industries including Oil & Gas, Chemical, Bio-Pharm, Mining, Water Treatment, Food & Beverage, and other key markets.
