

Gerstenberg Schröder Perfector 125

SCRAPED SURFACE HEAT EXCHANGER

GS Perfector 125 Benefits:

OUTSTANDING DURABILITY

Completely sealed, fully insulated, corrosion-free stainless steel casing guarantees years of trouble-free operation.

IMPROVED HEAT TRANSMISSION

Special, corrugated chilling tubes improve the heat transmission value and prevent any internal build-up of compressor oil.

HIGHER EFFICIENCY

Each refrigerant circuit has a drop tank that enables prompt start-up and reduces downtime during production halts.

EASY CLEANING AND MAINTENANCE

GS Perfector 125 is designed to keep downtime to an absolute minimum - CIP cycles are fast and efficient, and maintenance procedures are simple.

LESS NOISE

The low energy, cast iron gear box yields maximum power while keeping noise levels to a minimum.

SCRAPER ROTOR SYSTEM

The standard scraper system is the Bulldog system featuring two rows of plastic scrapers. The scrapers can be inspected and replaced without removing the rotor. This ensures less downtime. Alternatively, rotor systems with floating scrapers in a selection of different materials are available to suit your particular product application.

PRODUCT SEALS

The product seals are designed to be semi-balanced with tungsten carbide wearing rings. Flushed seals are also available.

MATERIALS

Product contacting parts are made in stainless steel AISI 316. Chilling tubes are made in carbon steel plated with hard chromium. Alternatively, other materials are available on request.

CERTIFICATIONS

Made in conformity with European Machinery Directive 2006/42/EC. The construction is in accordance with European Pressure Equipment Directive (PED) 2014/68/EU and an ASME sec. VIII div. 1 certificate can be delivered on request.

COOLING MEDIA

NH₃, freon.
