Pumps in Action

Aloe Vera Gel

Issued By: Jeff Sporer, Global Sales Manager Pumps and Valves
Date: July 28, 2015
Bulletin No: FB-0218

Pump:
Waukesha Cherry Burrell Brand - Model 030 Universal 1 Series Pump

Industry:
Personal Care – Aloe Vera Gel

Problem:
The customer originally installed an air operated diaphragm pump, but found it did not provide consistent aeration of the product due to high product shear across suction and discharge valves.

Solution:
The tight tolerances and gentle product handling of the Universal Series pump (model U1-030) outperformed the diaphragm pumps and produced the desired aerated product in a production environment.

Two main advantages of the Universal Series pump led to its selection:
1) The external circumferential piston (“ECP”) style rotors were able to scoop the gel without damaging the encapsulated bubbles
2) The process required daily cleaning and the pump’s economical single O-ring shaft seals provided a significant cost benefit over the more expensive mechanical seals offered on competitor pumps

The customer was so satisfied with the performance of the pump that they purchased an additional 10 units and their first Universal Series pump has been in the plant for years with no operational problems and minimal maintenance.
