Instructions for reading WCB's PD Pump Curves:

1. Start with viscosity
2. and calculated pressure
3. to get operating line
4. using required GPM
5. Find RPM
6. Find WHP
7. Find VHP
8. Add: HP = VHP + WHP

NOTE: Waukesha Cherry-Burrell (WCB) curves are intended for use as an aid for preliminary selection of pumps by trained and qualified engineers. All selections must be reviewed by authorized WCB personnel prior to placing an order. WCB is not responsible for unauthorized or incorrect selections resulting from the use of these curves.
