Introduction

The Gaulin 132CPR homogeniser, a five plunger, positive-displacement, reciprocating pump, was specifically designed to replace the aging Crepaco homogeniser. It is fitted with an application-specific homogenising valve assembly and hydraulic actuation. As a high-pressure pump, this unit can be fitted with a relief valve or bypass flow control valve. The Gaulin 132CPR homogeniser incorporates a durable slow-speed power end that reduces vibration and noise. Easy access to the hydraulic actuation system, lubrication oil and other auxiliary systems simplifies maintenance; saving time and money. The Gaulin 132CPR features a Gaulin mono-block design (ball and poppet style).

As a standard, the homogeniser is equipped with a Stellite XFD homogenising valve.

Designed to simplify routine maintenance, materials for plungers, packings, pump valves, valve seats and seals are custom-selected for your application. APV engineers will work with you to optimise the configuration for your specific application.

STANDARD OPTIONS

- Two-stage hydraulic valve actuation (HVA)
- Single-stage automatic hydraulic system (AHS)
- Two-stage automatic hydraulic system (AHS)
- Pulsation dampener(s) on inlet and outlet
- Aseptic cylinder design
- Electronic pressure transmitter excl. display
- High-pressure outlet
- Inlet pressure gauge
- Plunger lubrication control package
- Micro-Gap homogenising valve
- Tungsten carbide homogenising valve
- External cooling fan/main motor
- Motor starter
- Control cabinet, stainless steel
- Thermostat/oil temperature

SPECIAL OPTIONS

- Acid-proof cylinder
- Ceramic plungers with U- or V-rings
- Explosion-proof design
- Electropolished wettables
- High-temperature design
- Flow switch - power end cooling
GAULIN/MONO-BLOCK DESIGN
